Bandes horizontals esperades (neutrons en CH2):	
log10(edep) - +0.65	12C(n,n'g) inelastic, g = 4.44 MeV
log10(edep) - +0.35	H(n,g)D captura termica H, g = 2.22 MeV
log10(edep) - +0.10	12C(n,g) captura C, g = 1.26 MeV
continu	n(H,H)n recul de proto (elastic), E in [0, En]
continu	Compton / fotoelectric de g secundaris
log10(edep) - -14	Floor de tracking Geant4 (electrons baixa E)

Part E — Perfil <edep>(z) binned
Blau = truth Taronja = generated (les línies verticals = centroide z)

Part E — Perfil <edep>(z) binned
Blau = truth Taronja = generated (les línies verticals = centroide z)
